

TRANSPORTATION FUELS

ABSTRACT OF THE INVENTION

5 The present invention relates to Compositions of fuels for
transportation are disclosed, particularly organic compositions
which are liquid at ambient conditions. More specifically, it relates
to transportation fuels comprising suitable organic distillates, as a
predominant component, and limited, but essential, amounts of a
component comprising oxygen-containing organic materials, which
10 materials are typically derived from natural petroleum.
Beneficially, the oxygen content of these transportation fuels is at
least 0.02 percent by weight. Preferably the oxygen content these
transportation fuels is in a range from about 0.2 percent to about
10 percent by weight.
